

NCH-1 MONTEREY MINI CORE VIBE

NUX Monterey Vibe, born to recreate the grand, yet complex, psychedelic rock guitar sound of the 1960's and 70's. A perfect mimic of the complex physical-phenomena of its original analog circuitry. NUX Monterey Vibe generates a truly unique effect tone: a mix of chorus, tremolo, rotary, and phaser. This unique tone can be found in Pink Floyd's 'Breathe', Robin Trower's 'Bridge of Sighs', and the haunting audio mood created for 'Machine Gun' by Jimi Hendrix. Just like the traditional Uni-Vibe pedal, you can switch between Chorus (the Uni-vibe effect) or Vibrato, by simply holding the foot-switch. In Chorus mode, the mix of Phaser and dry guitar signals produces a classic Rotary sound. In Vibrato mode, your pitch modulates between high and low. Both modes yield a rich, vintage vibe at any speed, intensity, or volume.
