

GALA-520XW

5.25" 2-WAY COAXIAL CEILING SPEAKER

GALA X Series offers powerful and accurate coaxial loudspeakers with woofer diameters ranging from 5,25" to 8", and powers from 20W to 40W RMS. They can be used with standard 70/100V professional amplifiers, and provide transparent and brilliant sound. They are therefore suitable for any application of music distribution at higher volume levels.

The housing of GALA X speakers is made of high quality ABS. They also feature 0.5" Mylar-dome tweeters, polypropylene enforced woofers, and aluminum removable grille, which make these speakers suitable for humid environments.

Installation is very easy, thanks to the quick mounting system with 4 screws. These screws are hidden behind the grill, and offer an elegant and minimalist design. The built-in line transformers allow the use with 70/100V lines, and offer two power taps to better adapt to different speaker arrangement and amplifier powers. They come in white color, but can be painted in any color.
