# YOSEMITE™ TELE® PICKUP SET

A new generation of tone, Yosemite Telecaster® pickup sets are engineered using a mixture of alnico 5 and alnico 4 magnets, along with Formvar-coated wire, for expressive, well-defined sound that's highly musical and dynamic. Designed for rich, articulate tone in every combination, the high-output single-coil neck pickup is joined by a snarling single-coil bridge pickup. Flat-staggered pole pieces increase the output, letting the instrument's natural voice shine while the neck pickup's shellac coating and bridge pickup's wax potting helps control runaway feedback without compromising response.
