

SMXLR-750-BK MICROPHONE STAND WITH XLR CONNECTION

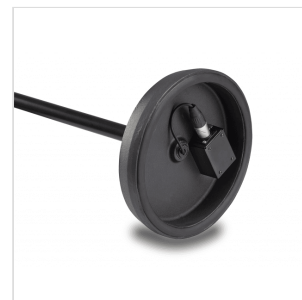

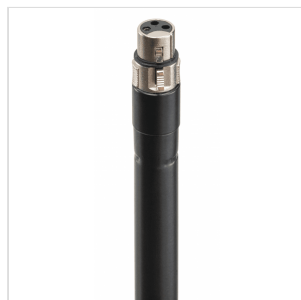

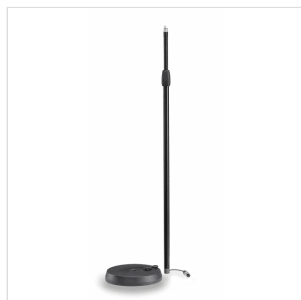

Soundsation SMXLR-750 BK is a straight microphone stand with a quick and easy height adjustment system.

The stand is equipped with a 3-pole XLR socket integrated in the upper tube to allow direct connection of a gooseneck type microphone. Using a flexible extension cable with XLR connectors (eg Soundsation GKXLR-16-BK) as an accessory, the stand becomes compatible with all types of microphone.

The stand stability is given by a 24.5 cm circular cast iron base on which the XLR connector for connecting the microphone cable is positioned.

Installation requires neither microphone clips nor vertical cable mounting.

The cast iron base, in addition to containing the connection system with microphone cables, is finished in rubber in the lower part to ensure both stability and sound insulation.
