EXP-1 EXPRESSION PEDAL, GRAY

Fender's EXP-1 Expression Pedal is a dynamic new dual-mode digital pedal that controls the volume or amp/effect parameters on Mustang® GT, III, IV and V amplifiers and on the new Mustang Floor multi-effects unit. Switch between "Volume" and "Expression" modes by stepping on the toe end of the pedal. Red and green LEDs indicate the mode in use.

In "Volume" mode—indicated by illumination of the green LED—EXP-1 controls the master volume or can be turned off. In "Expression" mode—indicated by illumination of the red LED—the EXP-1 controls most Mustang amp and effects parameters. Common among these, for example, are the frequency parameters of a wah effect and the rate/time parameters of modulation and delay effects.

The EXP-1 pedal puts great tonal control at your feet and provides a great way to make your Mustang amp or multi-effects unit even more fun, more expressive and more versatile.
