CC1 - VS-RACK CUBE CONNECTOR - BLACK

The Zomo CC1 Connector is a handy tool to connect two Zomo VS-Rack Cubes with each other. This tool consists of two parts which are placed between the two Cubes. Thanks to the fixing with 2 allen screws the connection is secured. So there is no more slipping or shaking. The connectors can either be placed on the side to expand the Cubes left and right, but you can also use the connection on top of the Cube. Stackable VS boxes are also possible with this method. The connector is available in the same four colours as our Zomo VS-Rack Cube series.
