

STAGEMAN AC-50

ACOUSTIC GUITAR AMPLIFIER W/ DIGITAL FX AND JAM FUNCTION (50W RMS)

Stageman AC50 is designed to accurately reproduce the natural sound of your acoustic guitar and vocals. The front control panel has two identical channels and both are optimized for microphones and acoustic guitar inputs respectively. The dual-input channels of NUX Stageman acoustic guitar amplifier provide you more options for small gigs or studio recording. Stageman's chorus and reverb effects can be used individually for both of the channels. Instrument channel chorus is a tasty vintage chorus with a smooth vibration and reverb effect is a plate reverb with two styles which you can dial low-level short-decay reverb effect between 1-5 and high-level short-decay reverb effect between 5-10 parameters. Mic channel chorus is also a vintage chorus but with less-vibration while reverb effect is one of the best built-in hall reverb you could ever desire. It has very clean reflections which you can feel the architecture of a well-designed concert hall. Stageman has flexible outputs for both stage and recording applications and designed for your interfacing needs. XLR DI output and Line output jack can be used as an analog audio-out for recording or sending to a monitor. Send/Return FX Loop inputs can be connected with any of your essential effect gear to improve your customized sound. Stageman comes with custom speakers to pursue the perfect sounding we've been searching for. And we succeed by teaming up two refined speakers (one 1 inch tweeter and one 6.5 inch woofer) into Stageman's cabinet. Equipped with 2-way high sensitive speaker system (1 x 6.5" woofers, 1 x 1" tweeter) delivers great dynamic sounds. Special design cabinet has well-calculated angle and provides excellent live sound monitoring. Stageman EQ's and effects offer wide range of dynamic controls and 2-way high-sensitive speakers providing studio quality sound to get the most versatility and to dial in the right tone for your music? Both the Stageman app and Bluetooth control pedal are custom-made for Stageman for wireless controls. They're also the keys to unlock the hidden features of Stageman: 20 groups of well-selected drum machine, 40s Loop station with unlimited overdubs and more.
