SLINKY M-STEEL REGULAR GUITAR STRING SET

This is one of the loudest guitar strings in the market today! The new M-Steels are made with a Maraging Steel core wire. Maraging, which is the M in the M-string name, is a military grade steel that is used in the aerospace industry. This state of the art hex core wire is covered with Ernie Ball's patented Cobalt alloy wrap. This explosive combination makes your strings deliver their maximum volume. The strings produce rich and full tones with a powerful low end and a crisp clear high end. The special combination of alloys make this string highly responsive and highly magnetic augmenting the output of your pick ups. The steel in the plain steel strings is tempered to withstand a great deal of stress. Ernie ball has also made these plain steels wound around the ball in order to prevent the strings from slipping, braking and going out of tune.
