BB SOPRANO SAX SERIE VERSA-X LIGATURE (EBANITE/ABS MOUTHPIECE)

It all started in 1974, with the original Rovner Dark, an innovative design that changed the way woodwind players thought about ligatures. Today's Next Generation Rovner ligatures represent the next wave of Rovner innovation, featuring patented Mass-Loaded Technology™ and unique Resonating Ribs™. Rovner Products are technologically advanced to help you produce nothing less than musical magic! The groundbreaking Versa-X is for any serious player seeking the ultimate in a high-performance ligature with universal appeal. Its performance-enhancing attributes shine in any musical setting. Classical players most often choose to cover the cradle, but for those times when acoustics are poor, or when the orchestra is overpowering the soloist, exposing the cradle offers unexpected benefits. Conversely, jazz/rock/blues players performing in amplified settings generally prefer an exposed cradle, but when the setting is intimate or a ballad is on the set list, a covered cradle offers added warmth for soulful expression. Finally, the Versa-X received a "Best Tools for Schools" honor at NAMM '12.
